E-Mental Health Interventions

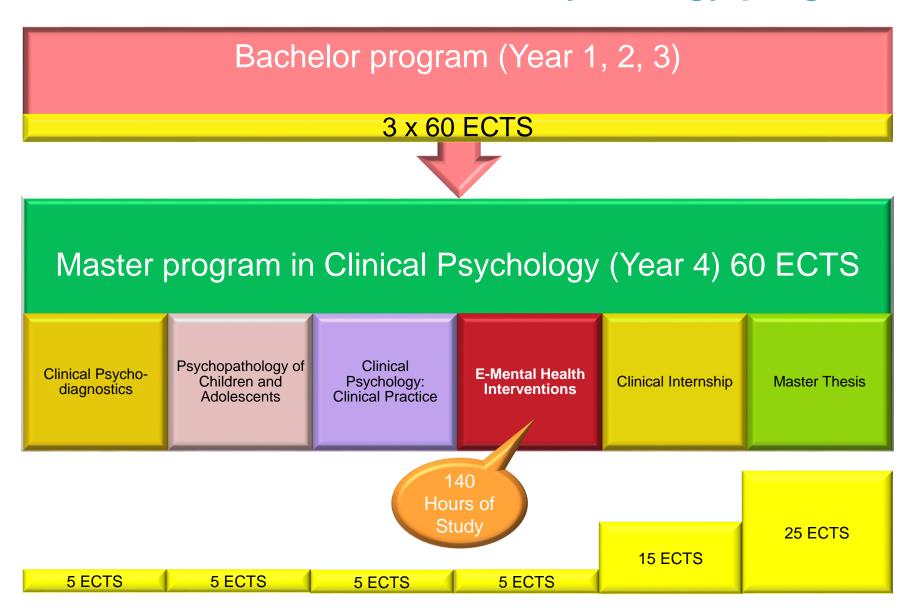

A Master Program Course

Viviane Thewissen, Nicole Gunther, Francine Dehue, Stijn Friederichs, Jacques van Lankveld

Open University of the Netherlands

Position in the MSc Clinical Psychology program

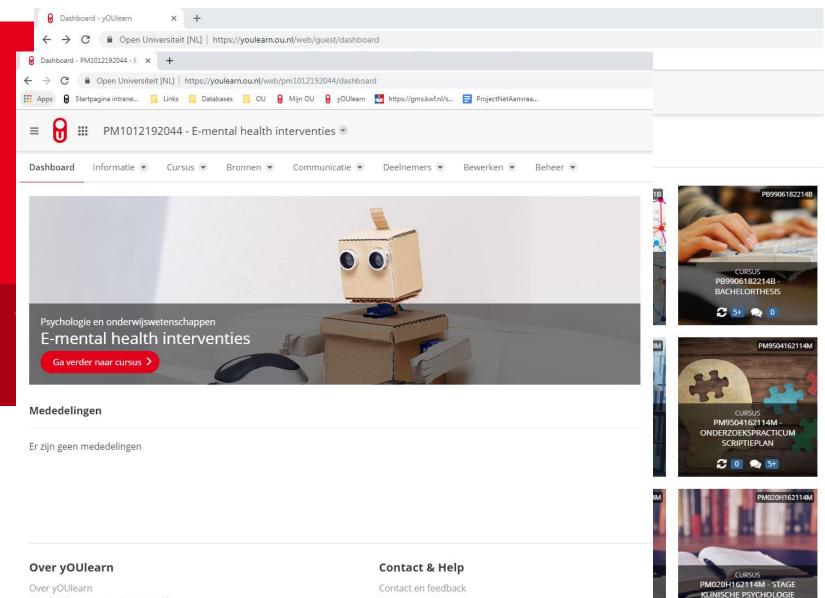

Learning Goals

After following this course students can:

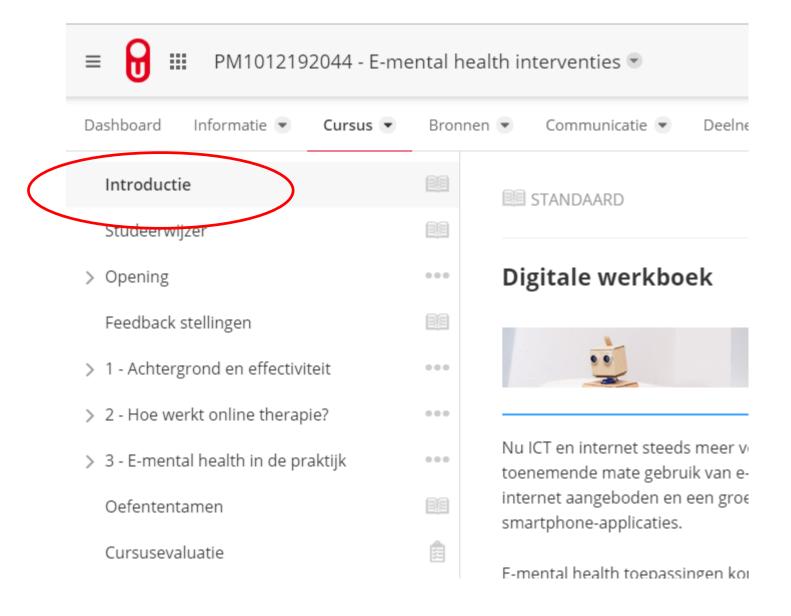

- indicate at which points online and blended treatment differ from face-to-face treatment
- indicate the clinical and cost-effectiveness of online treatment for various mental disorders, age groups and therapeutic orientations
- identify and apply relevant laws and regulations as well as ethical guidelines for online treatment
- explain the (qualitative and quantitative) equivalence of computerized / online psychological tests
- describe the added value of the Experience Sampling Method in the diagnostic process
- describe the importance of the therapeutic relationship in online treatment
- adopt a correct professional attitude in online contact with the client
- apply online communication skills that are needed in online treatment
- make substantiated considerations when choosing an e-mental health app
- explain the clinical applications of virtual reality therapy and serious gaming and give a critical reflection on their effectiveness
