

MIRROR app

Insight into its approach, development,
pilot studies and emerging results

Merel van Herpen and Manon Boeschoten
ARQ National Psychotrauma Centre

Need for screening after Potentially Traumatic Events (PTEs)

Most people: show resilient response after PTE

Challenge: identify who develops complaints and needs help?

MIRROR approach

MIRROR

What happened? ⓘ

MIRROR

When did it happen?

MIRROR

Are you troubled by images of or thoughts about the event?

never often

Score

Your score on MIRROR shows that you experience a lot of stress-related symptoms. And, you lack the requisite resilience, by which we mean that you perceive limited support from your environment, have little self-confidence or have difficulty dealing with problems. In addition, you've indicated that you function badly. That is why you have a red score.

Advice: it is now over four weeks ago that you endured a distressing event that could possibly be traumatising. In most cases, possible stress-related symptoms will have normalised after about a month, or have as good as disappeared. The stress-related symptoms that you are still experiencing and your functioning badly could be connected with the event recently endured, but there may also be (or have been for a while) other issues at play, such as financial problems, problems at work, or personal problems. Our advice to you is that you make an appointment with a GP or a counsellor, or contact a friend or family member for support. If you are unable to do this, clicking the 'Contact with professional' button will take you to a page on any support services available in your area. You can also talk to those close to you about your situation, or contact a helpline for support from others.

Development

Development: theoretical basis

Web-based translation
of evidence-based
guidelines on support
provision after shocking
events

Development: co-creation

Development: product specification

Necessary features:

Personal approach and anonymous access

Algorithm based on guideline and best practice

Follow GDPR regulations

Optional research questions

Data export function

Testing

Testing: functionality & usability testing

- Technical-functional testing

- Usability test among visitors of website and chat / email contacts of Victim Support NL

Testing: scientific validation

Research question:

Algorithm works as intended? By comparing MIRROR results with the results of several conventional screeners.

Results: MIRROR shows adequate validity and reliability in comparison to validated screeners

Implementation

Implementation: dissemination

- MIRROR App already embedded in websites of multiple organizations

- MIRROR App mentioned in National Care Standard on psychotrauma disorders

Scientific publication on validation will follow

Implementation blueprint

Implementation preparation:

Global implementation plan

Product manual

License, hosting and support options

Admin options build in for customization

Thank you for your interest!
